

**News****FP International launches recycled void fill**

Simeon Goldstein, [packagingnews.co.uk](http://packagingnews.co.uk), 20 July 2009

Void-fill specialist FP International is creating a protective packaging range made from recycled material.

FP will launch the first two products in its Green Family on 1 August but already plans to expand the range.

Flo-pak Green is a 100% recycled polystyrene loosefill that degrades if it ends up as litter, FP said.

Cell-o Green is a completely recyclable aircushion made from post-consumer plastic waste that FP said takes less energy to make than paper.

Northamptonshire-based FP has 38 staff and produces a wide range of air cushions and loosefill products. It is also an accredited packaging waste reprocessor.
