

## First orders received for the **FP** International "Mini Pak'r" machine

FP International has received an enthusiastic response to the launch of its new "MINI PAK'R" air cushion machine. Orders have been received as customers have started to realise the full potential of the MINI PAK'R, which is unlike anything else in the market place. The machine weighs only 6 kg and has a footprint of 36x33x26cm.

Operating at 7.5 m per minute and utilising 5 different types of film combining Novus and Cell-O technology, the machine caters for all your wrap, block and brace, void fill, interleave, comer and surface protection applications.

The MINI PAK'R intelligently replaces traditional packaging materials such as bubble wrap, foam in place and paper. With minimal training requirements and its ground breaking RFID technology the machine automatically adjusts itself to the correct air fill and temperature settings.

Aimed at small to medium users the MINI PAK'R has been designed to offer a reliable and cost effective solution to businesses with space constraints and a variety of packing needs.

Using the optional wallmount, the machine can be easily integrated into your packing area providing convenience and significant supply chain savings. FP is proud to build on its long track record in the development of market leading protective packaging systems.
